
DRONE DEBRIS FROM RUSSIAN ATTACKS IN UKRAINE FOUND IN ROMANIA

- 14.02.2025

Romania Journal (13 February 2025)

The aircraft had explosives on board.

The Ministry of National Defense announces that, following field checks, fragments of drones used by the Russian Federation in the attacks carried out on the Ukrainian port infrastructure on the Danube were discovered. The two drones that crashed on Romanian territory had explosives on board.

A team of specialists from the Ministry of National Defense, the Romanian Intelligence Service and the Ministry of Internal Affairs conducted investigations on Thursday, February 13, in two areas on the national territory, near the Romanian-Ukrainian border, where fragments resulting from the impact of Geran 1/2 drones, used by Russia in the attacks on Ukrainian port infrastructure on the Danube, were discovered, the press release sent by the MApN says.
